SUSTAINABLE INFRASTRUCTURE SOLUTIONS DustSeaLOR

I have reviewed the composition and manufacturing process for the World Enzymes product DustSeaLOR.

I confirm that the product is composed of a blend of polymeric materials with minor amounts of the parent monomers left over from the manufacturing process.

The product is not regarded as hazardous according to the criteria of the Australian Government National Occupational Health and Safety Commission.

When used in accordance with the Directions for Use on the label, DustSeaLOR poses no hazard to the environment. However, the concentrated product and used containers should not be allowed to enter natural waterways where the concentrated product could pose a threat to fish and other aquatic organisms.

Roger W. Franklin PhD, MRSC, MRACI, CChem
